RELEVANT EXPERIENCE

Senior Data Scientist – Prove Jun 2024 – Present

- Launched and maintained the company's first **Machine Learning** model using **Docker** containers in a **Kubernetes** cluster and model monitoring in **Looker**
- Developed and engineered new features for **ML models** from new data sources to improve the accuracy of our products to help protect our clients from **fraud**
- Mentored junior members of the Data Science team by pointing out potential pitfalls and misleading results, and helping to communicate results to a non-technical audience

Data Scientist – Prove Oct 2021 – Jun 2024

- Developed and trained new strategic **algorithms** and worked with R&D and Operations teams to implement them into **client-facing** production systems
- Addressed the specific **Model Governance** needs of major bank clients, understanding regulatory requirements and contributing to the company's adherence to industry standards.
- Investigated existing tools and products for their efficacy, **fraud-detection** capabilities, and appropriate trigger rates using **Python**, **SQL**, and **machine learning**.

Data Analyst – Prove Jan 2021 – Oct 2021

- Led analysis in data studies for potential new clients using **Python**, **APIs**, **statistics**, and **machine learning**, and serving as data expert on sales calls
- Diagnosed existing client issues using **Python** and **SQL**, explained the root cause, and suggested solutions on client calls
- Evaluated potential new data sources on their accuracy and efficacy in verification and fraud detection capabilities, and developed new products from them

Creator / Data Scientist – www.sixdegreestojoerogan.com Apr 2018 – Jun 2018

- Designed and deployed organized and easily searchable database of interview guests of over 160 podcasts by **web scraping** and **data cleaning** using **Python**
- Enhanced discoverability of new podcasts based on past guests
- Performed **exploratory analysis of network structure** to provide insights on who are the most influential podcasts and guests based on **network centrality measures**

Graduate Student Researcher – UC Santa Barbara Dept. of Physics Jun 2013 – Sep 2017

- Analyzed and simulated white dwarf + helium star binaries engaged in mass transfer leading to explosions using 1D stellar modeling software (MESA)
- Collaborated with scientists at Caltech, UC Berkeley, UC Santa Cruz, Bonn University, and Moscow State University, including conceiving of and modeling a new type of observable stellar collapse
- Furthered understanding of stellar explosion progenitors by authoring six and coauthoring three publications in The Astrophysical Journal

EDUCATION

UC Santa Barbara

- Ph.D. in Physics Mar 2015 – Sep 2017
- M.A. in Physics Sep 2012 – Mar 2015

University of Southern California

- BSc in Physics, Minor in Mathematics Aug 2007 – May 2011
